

Execute logistics processes between importers, suppliers, carriers, and 3PLs, from shipping order to cargo receipt at final destination.

Benefits to Importers

- **Reduced Supply Chain Inventory:** Reduced transit time, variability, delays, over-ordering
- **Reduced Transportation Spend:** Optimal freight allocation and container utilization, reduced air freight and detention
- **Operational Efficiencies:** Labor utilization, cross-docking, DC receiving

Solution Capabilities

- ➔ Freight Contracting
- ➔ Origin Operations
- ➔ In-Transit Visibility
- ➔ Documentation & Customs
- ➔ Destination Operations
- ➔ Global Business Intelligence

Power Tools for Global Logistics

As global sourcing advances, import supply chains grow increasingly complex: Hundreds of suppliers in dozens of countries, multiple 3PLs, carriers across all modes of transport, and ever more stringent regulatory compliance rules. Yet the tools of logisticians have barely changed. Emails and spreadsheet are still the dominant “tools of the trade.” The results are reactive fire fighting, excess inventory, expensive airfreight, and compliance risks that are no longer tolerable. Thus, many importers are looking at a new approach.

The Global Logistics Challenge: Data

What makes global logistics so difficult? It is all about data! Data that is exchanged between all the partners in the global trade process: Importer, exporter, 3PL, carrier, and customs broker. Often, that data is out of synch between partners and errors are made as a result. Global logistics is all about visibility and control across the partner network. In-house IT systems are not designed to provide this. But GT Nexus is.

Global Supply Chain Operating Platform

GT Nexus gives the embattled logistics organization what it needs: A global supply chain operating platform. A platform that lives outside the four walls of any one partner, a platform that is based on a network of integrated logistics providers, a platform that is connected with all global trading partners to exchange and synchronize data. With GT Nexus, importers establish visibility and control across their extended supply chain and execute the entire logistics process.

- **Freight Contracting:** Optimize ocean and air bids and freight allocation, control actual spend per allocations and contracted rates
- **Origin Operations:** Transform origin processes and gain visibility and control from PO to ASN, across suppliers, 3PLs and carriers
- **In-Transit Visibility:** Create a reliable supply chain from FOB-point to your DC and take control of your complete inventory pipeline
- **Documentation & Customs:** Share and manage global trade documents electronically and reduce customs delays and compliance risks
- **Destination Operations:** Reduce container detention, increase yard turnover, and improve DC cross-dock flow-through efficiency
- **Global Business Intelligence:** Optimize supply chain performance with a business intelligence solution across GT Nexus Trade and Logistics
