

Facilitate the commercial trade process among buyer, seller, and banks from purchase order to payment

Benefits to Importers

- Reduce redundant manual processes across internal and external groups, automate open account payments
- Improve working capital with extended payment terms and supplier financing
- Improve supplier relations by offering order management, shipment and payment automation tools

Solution Capabilities

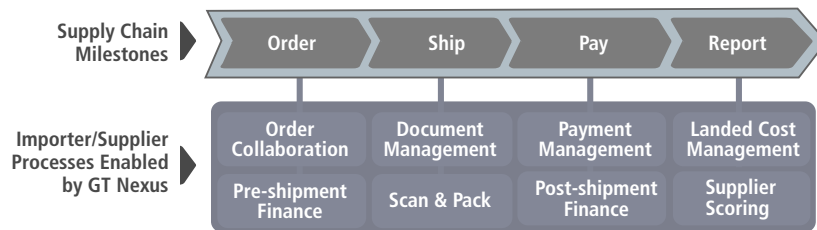

- ➔ Supplier Enablement 
- ➔ Purchase-to-Pay 
- ➔ Scan & Pack 
- ➔ Supply Chain Finance 
- ➔ Landed Cost Management 
- ➔ Global Business Intelligence 

Managing Complexity

To compete in today's marketplace, an importer must not only strive for supply chain operating efficiency, but also working capital efficiency. A typical importer works with hundreds of suppliers in dozens of countries and multiple 3PLs and carriers across all modes of transport. Working capital is stretched to cover long, unpredictable supply chains. Product cost reductions driven by low-cost country sourcing can be eroded by the financial demands of the globally distributed supply chain network.

Supply Chain's Impact on Working Capital

Leaders are widening the scope of supply chain management to tracking supplier production, enforcing shipping rules, synchronizing payments and financing to the movement of goods, and determining the actual landed cost of the product at destination. Visibility to the extended supply chain highlights cross-functional financial opportunities, such as moving to automated open account processing and offering advanced forms of financing to suppliers. Companies can free up millions in working capital and take the benefits directly to the bottom line.

Global Supply Chain Operating Platform

GT Nexus supports the cross-functional global supply chain network by providing a platform that lives outside the four walls of any one company and is based on a network of partners to exchange and synchronize data. GT Nexus allows importers to establish visibility and control and then leverage the connections between the physical and financial processes, including:

- **Supplier Enablement:** Extend your digital supply chain to global suppliers, track order acceptance, origin activity, and supplier performance
- **Purchase-to-Pay:** Use a secure platform to create and share digitized, compliant documents, automate the payment process, and resolve exceptions
- **Scan & Pack:** Improve inventory and warehouse management by printing and scanning UCC-128 carton labels
- **Supply Chain Finance:** Integrate bank financing to your suppliers to optimize working capital and liquidity across your supply chain
- **Landed Cost Management:** Determine true landed cost of globally sourced goods by the time they are received at final destination
- **Global Business Intelligence:** Optimize supply chain performance with a business intelligence solution across GT Nexus Trade and Logistics
