

# Collaborative and Advanced ISF

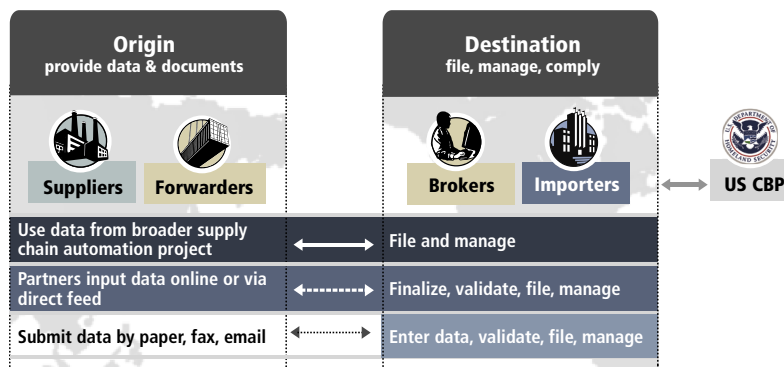

## A path to full ISF automation to ensure compliance, minimize risk and generate value

The Importer Security Filing (ISF) regulation requires US importers to gather and report data they currently don't have access to. Several of the data sets are required by US Customs and Border Protection (CBP) at a stage in the import process when the information is only available at the point of origin, whereas the responsibility to file resides at destination. Few companies currently have the ability capture this information from their trading partners on a timely basis. In most cases, it will take collaboration between many partners to satisfy ISF requirements.

Built on the foundation of an on-demand platform and multi-party collaborative network, the GT Nexus ISF solution provides flexible workflows at various levels of automation to pace your way through process changes and data management efficiency. The GT Nexus solution provides a path to full ISF automation and compliance that can minimize risk, begin generating value immediately and ultimately lead to full supply chain visibility and control.

### GT Nexus ISF Solution

- Advanced ISF
- Collaborative ISF
- Easy ISF™

GT Nexus offers a three tier solution to help importers comply with 10+2.

### Key Benefits

- Single platform to manage ISFs across your trading partners and geographies
- Ensure timely compliance with the new '10+2' security filing rule
- Avoid in-transit delays and potential fines
- Flexible workflows to ease your way through process changes and pave a path to full automation
- Avoid rekeying of data, recycle data from trade documents to generate ISFs
- Proactively identify and manage at-risk shipments for tighter process control

### Features

- State of the art Web-form user interface to create ISFs manually
- Collaborate with your trading partners to receive Prep ISF data through integrated messages or a Web UI
- Leverage data from purchase orders to automate and integrate ISF with the creation of trade documents and origin operations
- Track ISF status against orders and shipment plans
- Dynamic required field validation for missing elements
- One click submission to CBP
- Receive and track ISF response and status advisory from CBP
- Search ISFs by status, date and other shipment routing information (vessel, voyage, ports, etc.)
- Create and use reports to monitor and manage ISFs
